* When printing 4R size, and when supplies are replaced regularly according to Fujifilm's recommendations. The number of printable sheets varies depending on the usage environment and conditions.

Versatile and long-lasting

What photo businesses demand is power and the ability to adapt to different uses. The Frontier DE100-XD is a compact, high-performance printer that features durability, high image quality, and high-speed processing, along with handling printing on multiple surface types. What's more, it allows flexible system configuration for offering wide-ranging print products, which can meet the industry's diversifying needs.

300,000

Sheets of Durability

The printer can last through 300,000 prints* at 4R size (that's 1.5x our previous printer). Even for frequent printing of large volumes, you can count on it for the long run.

* When printing 4R size, and when supplies are replaced regularly according to Fujifilm's recommendations. The number of printable sheets varies depending on the usage environment and conditions.

6 Types of Surfaces Available

In addition to Glossy, Luster, Silk, and Pearl, the lineup now also includes Photo Matte and Canvas Texture. By using a surface type to suit the particular purpose, you can offer not just everyday snapshots but also prints with a high-class feel, photos with a calming mood, and a variety of other styles.

Image is for illustration purposes.

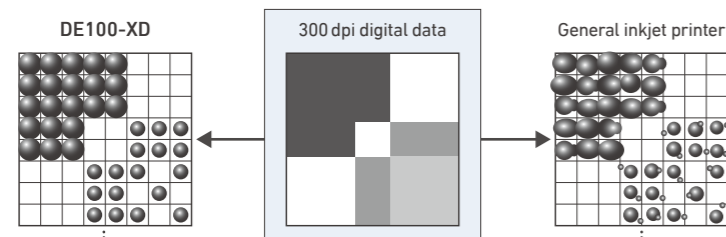

5 Levels of Density Adjustment

You can change the print density and brightness without spoiling tonality. With 5 step adjustments, you can optimize it according to your preference and various applications.

High Image Quality

Precise application of ink results in vivid quality prints

Fujifilm's proprietary ViViDiA D-photo high-viscosity 4-color ink system, combined with a 1,200 x 1,200 dpi high-resolution head, accurately applies ink droplets at the ultra-small size of 1 picoliter. This creates beautiful prints with unparalleled fine granularity and vividness. Your customers are sure to be impressed.

DE100-XD

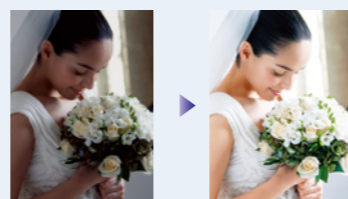

General inkjet printer (6-color inks)

With our "ViViDiA" ink system, it is possible to print with excellent color formation and a wide color reproduction range.

Fujifilm's Superior Image Processing

Fujifilm's proprietary technology Image Intelligence™ automatically compensates for problematic conditions such as poor lighting, excessive backlight, high contrast, underexposure and overexposure — to produce beautiful images.

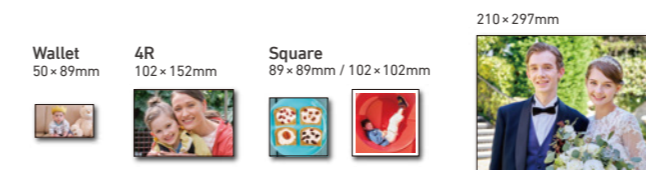

Original image Optimized image after image processing

Meets the diversifying needs of consumers

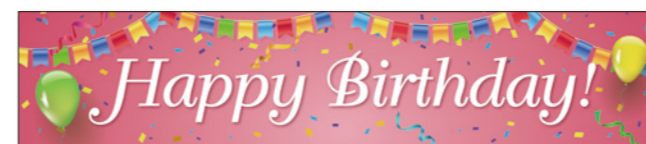

A variety of paper types let your business keep up with changing trends

Ranging from 89 x 50 mm to 210 x 1,000 mm, many different paper sizes are supported. Print wallet-size, 4R size, square sizes made popular by the spread of smartphone apps, and even banners for decorating interiors.

Paper width (mm)	89	102	127	152	203	210
Paper length (mm)	89 - 1,000					
Paper Surfaces	Glossy		Luster		Silk	
	Photo Matte		Canvas Texture		Pearl	

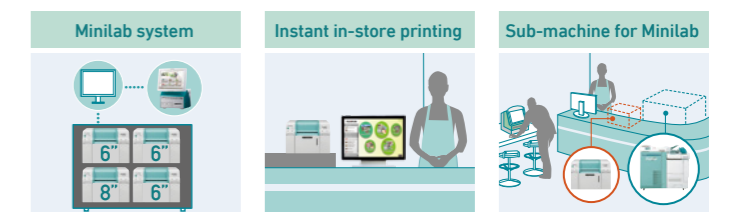

Banner 210 x 1,000mm

Flexibly meets the needs of a variety of shop types

The flexibility of system configuration allows for a wide range of purposes

By connecting 2 to 4 units, you can achieve processing capability equivalent to an Inkjet Minilab with a small initial investment.

Low-investment and compact, the DE100-XD is highly recommended even for photography shops, general stores, etc. that have limited space for installation.

It's ideal as a Minilab sub-machine for situations such as when the silver halide printer is still starting up right after the shop opens, or when there's a sudden need for ID photos.

Fast processing speed for high productivity

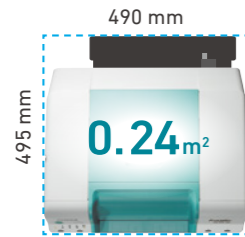

Approx. 330 [*] sheets/hour (4" x 6")	Approx. 10.8 sec./sheet (4" x 6")	In case of Quad-unit Approx. 1,320 sheets/hour (4" x 6")
--	---	---

* It depends on our specified measurement method. Above performance may not be satisfied in some cases according to the use environment and condition.

Space-saving & easy to use for more efficient business

Compact Size

With a required footprint of only 0.24 m², the printer can be installed in small spaces.

Easy Maintenance

All maintenance can be done from the front panel

Simply open the front cover to replace ink cartridges or the paper roll.

Empty the scrap paper Replace a paper roll Replace an ink cartridge

Consumables need replacement less often

High-viscosity ink prevents drying of the head and reduces the ink needed for head maintenance. This allows consumables to be replaced less frequently.

Supports a wide range of system environments

Connect with "MS" Workflow Management Software

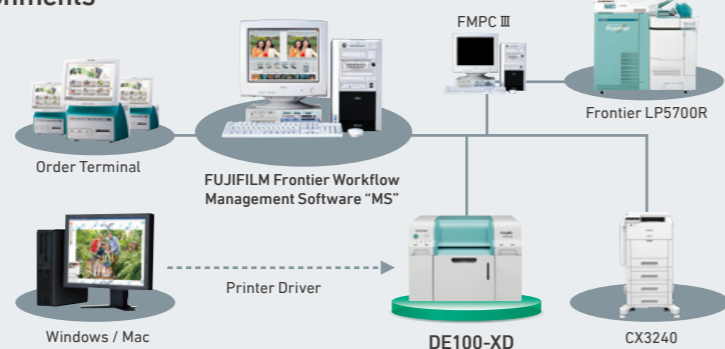

By connecting the DE100-XD with the FUJIFILM Frontier Workflow Management Software "MS", you can efficiently control and manage it together with the CX3240 and other Fujifilm printers. **Optional MS software is required*

Connect with standard printer driver

The DE100-XD can also connect to systems that don't use MS, allowing network printing from a wide range of applications.

Take orders from smartphone apps

By connecting to a simple control PC (Multi Print Manager), you can accept orders from users' smartphones as a low-investment way to begin offering print services.

Specification

Print mode	Standard mode / High Quality mode	Ink cartridges	4 colors (C,M,Y,K) of dye-based ink (volume: 200ml per color)
Print method	Piezoelectric inkjet system	Footprint	Approx. 0.24 m ²
Print size	89 × 50 mm – 210 × 1,000 mm	Power requirements	AC100V-120V, 50/60Hz, 6.0A AC220V-240V, 50/60Hz, 3.0A
Print speed	10.8 sec./sheet (4" × 6") / Standard mode	Dimensions (mm)	W490 × D495 × H354 (including maintenance cartridge tank)
Print resolution	1,200 × 1,200 dpi / Standard mode 2,400 × 1,200 dpi / High Quality mode	Weight	Approx. 26.5 kg (not including paper and ink cartridges)
Paper loading	1 roll	Electricity consumption	Average of less than 150 W
Paper types	Glossy / Luster / Silk / Pearl Photo Matte / Canvas Texture	Printer life	300,000 sheets (4" × 6") or 3 years

**Specifications are subject to change without notice.*

Consumables

Fujifilm: a brand you know you can trust

Genuine consumables made by Fujifilm are recommended.

In order to maximize the printer's performance, it is recommended to use genuine Fujifilm paper and ink cartridges. Using other consumables may not allow the printer to produce its intended level of performance, and have a negative effect on the printer and the quality of prints.

Special Paper for High Quality Prints

Safety Precautions

- To ensure safe and proper usage of the printer, be sure to read the "User Manual" and "Precautions for Use" before using it.
- Do not set up the printer in a place with a lot of water, humidity, steam, dust, oil smoke, etc. Doing so creates a risk of fire or electric shock.
- This product is a machine for commercial use. It is not intended for use in places where children may be present.
